Professional Summary

Full-Stack Engineer focused on building scalable, production-grade SaaS and AI-powered platforms. Experienced in Django, DRF, FastAPI, Next.js, PostgreSQL, and AWS, with hands-on experience in LLM applications, RAG, schema-based multi-tenancy, secure authentication, CI/CD, and observability. Strong focus on backend architecture, data workflows, system reliability, and maintainable production systems.

Technical Skills

- **Languages:** Python, JavaScript, TypeScript, SQL
- **Backend:** Django, Django REST Framework, FastAPI, SQLAlchemy, Pydantic, Alembic, REST APIs, JWT, RBAC
- **Frontend:** React.js, Next.js, Zustand, HTML5, CSS3, Tailwind CSS
- **AI & Data:** LangChain, LangGraph, RAG, ChromaDB, ELT Pipelines, PostgreSQL, Vector Search
- **Architecture & Security:** Clean Architecture, Microservices, Schema-Based Multi-Tenancy, MFA, SSO, HTTP-Only Cookies
- **Cloud & DevOps:** AWS EC2, RDS, S3, Cloudinary, Docker, Jenkins CI/CD, GitHub Actions, Nginx, Gunicorn
- **Observability & Quality:** Prometheus, Grafana, Flower, Lighthouse, CodeQL, CodeRabbit
- **Tools & Workflow:** Git, GitHub, Postman, Slack, Pull Requests, Code Reviews
- **Background Processing:** Celery, Redis, Celery Beat, WebSockets

Experience

- **Full Stack Developer — Bridgeon** May 2025 – Present
 - Developed scalable web applications using Django REST Framework, React, FastAPI, Next.js, and PostgreSQL following Clean Architecture and modular design principles.
 - Designed secure REST APIs implementing JWT authentication, role-based access control (RBAC), and layered permission enforcement.
 - Optimized database queries and request execution paths to improve backend performance and API responsiveness.
 - Built responsive React interfaces using Redux Toolkit and Context API, implementing debouncing, throttling, lazy loading, and reusable components to improve state management and frontend performance.
 - Implemented Razorpay payment workflows with transaction verification, idempotent order handling, and failure recovery.
 - Deployed applications on AWS (EC2, RDS) using Docker, Nginx, Gunicorn, and GitHub Actions CI/CD.
- **Project Intern — Regional Technologies** Oct 2024 – Mar 2025
 - Collaborated with a cross-functional team to develop a digital governance platform using Django, Flutter, and PostgreSQL, contributing to backend APIs and database-driven features.
 - Implemented REST APIs, RBAC, complaint workflows, and PostgreSQL data models while collaborating through Git-based development and code reviews.

Projects

- **Cipher Analytics — Privacy-Preserving Analytics Platform**
 - Building a privacy-preserving analytics platform that performs statistical analysis on encrypted data using Fully Homomorphic Encryption (CKKS via TenSEAL), allowing computations without exposing sensitive information.
 - Designed an asynchronous task processing architecture using Celery, Redis, and Celery Beat, with dedicated worker queues for compute-intensive, scheduled, and general background tasks.
 - Developed machine learning pipelines for anomaly detection, clustering, and model explainability using SHAP, UMAP, and HDBSCAN.
 - Built interactive dashboards using React, Three.js, React Three Fiber, and ECharts to visualize large-scale analytical results.
 - Implemented real-time task monitoring using Django REST Framework, Django Channels, WebSockets, and Daphne to provide live progress updates.
 - Improved application reliability through rate limiting, audit logging, static type checking, and automated security analysis.
 - Containerized services with Docker to ensure consistent development and deployment environments.

- Optimized background task execution by routing workloads to dedicated queues, reducing contention between long-running and lightweight tasks.
- **WorkPilot AI — Multi-Tenant Workflow Automation Platform (Group Project)**
 - Building a multi-tenant SaaS platform using Next.js, FastAPI microservices, and PostgreSQL to automate HR, IT, and organizational workflows.
 - Implemented schema-based multi-tenancy with tenant-aware middleware for secure data isolation across organizations.
 - Developed authentication services including JWT access/refresh tokens, HTTP-only cookies, RBAC, password reset, SSO, and tenant-aware authentication.
 - Contributed to modular backend services following Clean Architecture and REST API design principles.
 - Developed workflow features supporting approval processes, notifications, and department-specific business rules.
 - Built tenant-aware frontend authentication flows using Next.js App Router, TypeScript, and Zustand.
 - Used Docker, GitHub Actions, and collaborative Git workflows for development and CI/CD.
- **NOIRÉL — Luxury E-Commerce Platform (Production)**
 - Built a full-stack e-commerce platform using React and Django REST Framework supporting the complete order lifecycle from product browsing to payment confirmation.
 - Designed modular REST APIs for catalog management, cart operations, order processing, and payment verification.
 - Implemented JWT-based authentication with protected routes, admin control panel, and role-based access control.
 - Integrated Razorpay payment gateway with secure transaction validation, webhook verification, and failure recovery handling.
 - Optimized frontend performance with efficient state management and lazy-loaded components, achieving a **100/100 Lighthouse performance score**.
 - Deployed production environment on AWS infrastructure using Nginx + Gunicorn with automated CI/CD pipelines through GitHub Actions.
 - Live Demo: noirel-perfume.vercel.app

Education

- **Bachelor of Computer Applications (BCA)** — SAFA Arts & Science College Aug 2022 – Apr 2025

Certifications

- Python Django & Flutter Certification — Regional Technologies (2025)
- Certified Cyber Security Analyst (CCSA) — Red Team Hacker Academy (2022)
